rebirth of the english comic strip a kaleidoscope 1847 1870 enters deep
 into an era of comic history that has been entirely neglected this
 buried cache of mid victorian graphic humor is marvelously rich in
 pictorial narratives of all kinds author david kunzle calls this period
 a rebirth because of the preceding long hiatus in use of the new genre
 since the great age of caricature c 1780 c 1820 when the comic strip was
 practiced as a sideline suddenly in 1847 a new post töpffer comic strip
 sparks to life in britain mostly in periodicals and especially in punch
 where all the best artists of the period participated if only
 sporadically richard doyle john tenniel john leech charles keene and
 george du maurier until now this aspect of the extensive oeuvre of the
 well known masters of the new journal cartoon in punch has been almost
 completely ignored exceptionally george cruikshank revived just once in
 the bottle independently the whole serious contrasting hogarthian
 picture story numerous comic strips and picture stories appeared in
 periodicals other than punch by artists who were likewise largely
 ignored like the punch luminaries they adopt in semirealistic style
 sociopolitical subject matter easily accessible to their lower middle

class readership the topics covered in and out of punch by these strips and graphic novels range from french enemies king louis philippe and emperor napoleon iii to farcical treatment of major historical events the bayeux tapestry 1848 the great exhibition of 1851 and the franco prussian war in 1870 artists explore a great variety of social types occupations and situations such as the emigrant the tourist fox hunting and indian big game hunting dueling the forlorn lover the student the artist the toothache the burglar the paramilitary volunteer darwinian animal metamorphoses and even nightmares in rebirth of the english comic strip kunzle analyzes these much neglected works down to the precocious modernist and absurdist scribbles of marie duval europe s first female professional cartoonist

this book presents a solutions based approach to reducing and removing co₂ from the atmosphere transforming it into solid crystalline caco₃ through the ability of marine organisms such as molluscs crustacea corals and coccolithophore algae the overwhelming advantage of this approach is that it promises enhanced climate mitigation in comparison to planting forests industrial engineering carbon capture and storage process it also provides a sustainable food resource furthermore it would improve the ocean s biodiversity at the same time as the excess atmospheric co₂ released by our use of fossil fuels is returned to the place it belongs as a present day fossil safely out of the atmosphere to the distant future if the level of finance and global effort that are readily foreseen for forest management and flue gas treatments were applied to expansion of global shellfish cultivation curative amounts of carbon dioxide could be permanently removed from the atmosphere within a few decades the concept presented in this book could have a profound influence on the life of the planet
