the current economy is more complex and surprising than ever before global and local factors combine to shape a very diverse framework where organizations and management practices are challenged this book presents a selection of studies that deal with economic behavior both at the macro and micro level it presents some

well defined aspects and builds on a new understanding of decision making and economic development based on ethics and knowledge it also emphasizes the human factor in shaping business and economic strategies as part of the international competition and interdependencies

may be related to another basic assumption in economic psychology that the human capacity to process information from the environment is limited and that the kind of optimal use of that information postulated in many economic theories is therefore not possible the research methods used are mainly geared towards empirical research and there mostly towards survey research and experimentation experimentation involves most often simulated behaviour in a laboratory which allows the experimental manipulation of possible causes of behaviour which would not be possible in real life survey research is the most widely used instrument for investigating real world behaviour with all its caveats about establishing causal explanations several introductory books e g fumham lewis 1986 lea tarpy webley 1987 van raaij van veldhoven wlimeryd 1988 and articles e g van raaij 1979 wiswede 1988 have appeared recently which try to give an overview of the field of economic psychology and which in varying degrees demonstrate the three foundations of economic psychology just mentioned others have concentrated on certain subtopics such as the psychology of the labour market e g baxter 1988 pelzmann 1986

psychologists have been observing and interpreting economic behaviour for at least fifty years and the last decade in particular has seen an escalated interest in the interface between psychology and economics the cambridge handbook of psychology and economic behaviour is a valuable reference resource dedicated to improving our understanding of the economic mind and economic behaviour employing empirical methods including laboratory experiments field experiments observations questionnaires and interviews the handbook covers aspects of theory and method financial and consumer behaviour the environment and biological perspectives with contributions from distinguished scholars from a variety of countries and backgrounds the handbook is an important step forward in the improvement of communications between the disciplines of psychology and economics it will appeal to academic researchers and graduates in economic psychology and behavioural economics

an international handbook linking the disciplines of psychology and economics

a comprehensive overview of contemporary economic psychology economic psychology presents an accessible overview of contemporary economic psychology the science of economic mental life and behavior is increasingly relevant as people are expected to take more responsibility for their household and personal economic decisions the text will in addition to reviewing current knowledge on each topic presented consider the practical and policy implications for supporting economic decision making economic psychology examines the central aspects of adult decision making in everyday life and includes the theories of economic decision making based on risk value and affect and theories of intertemporal choice the text reviews the nature and behavioral consequences of economic mental representations about such things as material possessions money and the economy the editor robert ranyard a noted expert on economic psychology presents a life span developmental approach from childhood to old age he also reviews the important societal issues such as charitable giving and economic sustainability this vital resource reviews the economic psychology in everyday life including financial behaviour such as saving and tax paying and matters such as entrepreneurial activity offers an introduction to the field and traces the emergence of the discipline from adam smith to george katona and herbert simon includes information on societal issues such as charitable giving and pro environmental behaviour considers broader perspectives on economic psychology life span psychological development from childhood to old age written for students of psychology economic psychology reviews the most important information on contemporary economic psychology with a focus on individual and household economic decision making ranging widely across financial matters such as borrowing and saving and economic activities such as buying trading and working

economics nobel laureate herbert simon developed the concept of bounded rationality in the 1950s this asserts that the cognitive abilities of human decision makers

are not always sufficient to find optimal solutions to complex real life problems leading decision makers to find satisfactory sub optimal outcomes this was a foundational component of the development of behavioural economics but in recent years the two fields have diverged each with its own literature its own approach and its own proponents behavioural economics explores the areas of commonality between economics and psychology in terms of its focus and its approach whereas the bounded rationality literature largely analyses the implications of sub optimal decision making through the mathematically sophisticated methodology of mainstream economics this book examines the nature and consequences of this divergence and questions whether this is a case of beneficial specialisation or whether it is unhelpful potentially stunting the development of some aspects of economics it has been suggested that the major deficiency of behavioural economics is that it has failed to produce a single widely applicable alternative to constrained optimisation this book evaluates the extent to which this is the true and if it is the extent to which it is a product of the divergence between the two literatures it also seeks to identify commonalities between the two subjects and suggests avenues of research in economics that would benefit from a re fusion of these two fields
