this textbook examines database systems from the viewpoint of a software
developer this perspective makes it possible to investigate why database systems are
the way they are it is of course important to be able to write queries but it is equally
important to know how they are processed we e g don t want to just use jdbc we also
want to know why the api contains the classes and methods that it does we need a
sense of how hard is it to write a disk cache or logging facility and what exactly is a
database driver anyway the first two chapters provide a brief overview of database
systems and their use chapter 1 discusses the purpose and features of a database
system and introduces the derby and simpledb systems chapter 2 explains how to
write a database application using java it presents the basics of jdbc which is the
fundamental api for java programs that interact with a database in turn chapters 3 11
examine the internals of a typical database engine each chapter covers a different
database component starting with the lowest level of abstraction the disk and file
manager and ending with the highest the jdbc client interface further the respective
chapter explains the main issues concerning the component and considers possible

design decisions as a result the reader can see exactly what services each component provides and how it interacts with the other components in the system by the end of this part s he will have witnessed the gradual development of a simple but completely functional system the remaining four chapters then focus on efficient query processing and focus on the sophisticated techniques and algorithms that can replace the simple design choices described earlier topics include indexing sorting intelligent buffer usage and query optimization this text is intended for upper level undergraduate or beginning graduate courses in computer science it assumes that the reader is comfortable with basic java programming advanced java concepts such as rmi and jdbc are fully explained in the text the respective chapters are complemented by end of chapter readings that discuss interesting ideas and research directions that went unmentioned in the text and provide references to relevant web pages research articles reference manuals and books conceptual and programming exercises are also included at the end of each chapter students can apply their conceptual knowledge by examining the simpledb a simple but fully functional database system created by the author and provided online code and modifying it

this volume focuses on innovative school university community collaborations that are being implemented in rural places in the united states a foundational belief that underpins the contributions to this volume is that rural communities contain within themselves the resources to promote and sustain vibrant educational endeavors this belief has inspired a wealth of innovations that collectively offer a countervailing perspective to the view that global competitiveness is the preeminent goal of education and that this goal is best served by big education since early last century there has been a pervasive implicit and sometimes explicit assumption that rural places are bereft of the ability to educate children effectively as repeatedly witnessed in this volume in collaboration with universities schools in rural places and the communities that both sustain and rely on them can appropriately configure the educational environment to optimally nurture the intellectual growth of children the chapters in this volume are grouped into three parts that explore in turn the design

features of innovative school universitycommunity collaborations some novel approaches to such collaborations and the contours of parental and community involvement in such collaborations chapters discuss both larger scale collaborations that involve many school districts across wide spread regions and smaller scale collaborations that involve intensive engagements among the educators and members of smaller communities and offer theoretical insights into the collaborative process itself as mentioned above two narrative threads run through the chapters that effective collaborations address goals and aspirations expressed by those who are privileged to live in rural america and that effective collaborations are oriented to building on the strengths inherent in the social fabric of those rural communities

examines the politics of conditional cash transfers in latin america used to put billions of dollars into the hands of the poorest people analyzing the social policy institutional design development and consequences of the policy

any course evaluator who has tried to evaluate a course of study knows just how difficult it is to get the right sort of information the goals of a course are often unclear a programme often has no other programme to compare it with and they may be asked to judge a curriculum without knowing if it was actually followed they also face difficulties in persuading teachers to use assessments to improve their teaching the contributors use a series of case studies to show how improvements in evaluation methods can help to shape better education policy
