excerpt from the anatomy of the human skeleton it is not necessary to lay emphasis on the importance of a knowledge of the skeleton as an integral part of the study of human anatomy and in the literature bearing upon the subject we find masterly accounts of the constituent bones which rank as classics in the education of the student in this book i have ventured to wander in some degree from the well trodden road and to lead the reader by other ways to the comprehension of his subject my intention has been to induce him to think of the bones as they exist in the body rather than as they lie on the table before him and to do this i have laid stress because he must use the prepared specimens on the meaning of small details and on the relations of the bone and have relegated the pure description of the dry bone to a secondary place in other words each part of the skeleton has been used as a peg on which to hang a consideration of the neighbouring structures in the hope that this may afford a new point of view to the reader and enable him to grasp the intimate connection between them such a way of regarding the skeleton opens up a very extensive field of description and within the limits of a students hand book it is only possible to deal with some out of the many points which offer themselves for development but i hope that those of which i have treated in this volume may be of value to the student and may lead him to think of the skeleton as something more than a dry subject for study and to search for reasons for the hundred and one abstract and concrete qualities which his own observation will prove any particular bone to possess if it has this effect one of my objects in writing the book will have been attained the majority of the illustrations which the generosity of messrs j a churchill has enabled me to insert are intended merely to help the student to apply the descriptions in the text to the actual specimens if in spite of their many artistic imperfections they are of use in this respect i shall be content they have been drawn from specimens in my possession or in the anatomical department in the school of this hospital it is a pleasure to acknowledge my indebtedness to my colleague dr r h robbins for his careful reading of the proofs to mr r m handfield jones for the same service in a part of the work and to my wife for help in preparing the book for the press about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
