methods based on the context 4 How do I handle mutually exclusive projects Mutually exclusive projects mean you can only choose one Use incremental analysis to compare alternatives focusing on the differences between projects 5 Where can I find more practice problems Sullivans book contains numerous examples 4 and endofchapter problems You can also search online for additional practice problems and resources Remember to prioritize legally obtained copies of the book and supplementary materials

whereas there is widespread belief that workers in temporary help services are subject to poorer working conditions in particular pay than comparable workers in the rest of the economy there is little evidence on whether that is driven by the sector per se or by the workers characteristics the first aim of this analysis is to quantify the wage penalty if any for workers in these firms secondly we analyze the wage profile of workers right before and after spells of these linked employer employee data for portugal enable us to account for observable as well as unobservable worker quality our results show that workers in these firms earn lower wages than their peers and that this difference is mostly due to the workers characteristics we estimate

that workers in these firms earn on average 9 less than comparable workers in the rest of the economy if we control for the workers observable attributes only this difference is reduced to about 1 when we control for unobservable characteristics as well however interesting differences emerge across groups younger workers both men and women earn higher wages in these firms than their peers in other firms while the opposite holds for prime age and older workers moreover for young workers these firms are not associated with a stigma effect that slows their wage progression after they work for these firms as opposed to prime age and older workers in particular males also before entering these firms the wage trends are different prime age and older workers both male and female see their wages deteriorate relative to their peers before entering these firms suggesting that adverse labor market conditions may motivate them to search for a new job on the contrary for young workers we do not detect any pre-entry wage trend
