this book presents a comprehensive description of the physics of free electron lasers starting from the fundamentals and proceeding through detailed derivations of the equations describing electron trajectories and spontaneous and stimulated emission linear and nonlinear analyses are described as are detailed explanations of the nonlinear simulation of a variety of configurations including amplifiers oscillators self amplified spontaneous emission high gain harmonic generation and optical klystrons theory and simulation are anchored using comprehensive comparisons with a wide variety of experiments

this book is an informal readable introduction to the basic ideas of thermal physics it is aimed at

making the reader feel comfortable with the extremum principles of entropy and free energies there is a repeating theme molecules spins do x to maximize their entropy and molecules spins do xx to minimize their free energy this finally leads to the idea of the landau ginzburg free energy functional the author illustrates how powerful the idea is by using two examples from phase transitions
