this book is a compilation of high quality papers focussing on five major areas of active development in the wide field of differential equations dynamical systems infinite dimensions global attractors and stability computational aspects and applications it is a valuable reference for researchers in diverse disciplines ranging from mathematics through physics engineering chemistry nonlinear science to the life sciences

speech production models phonetic processes and techniques brings together researchers from many different disciplines computer science dentistry engineering linguistics phonetics physiology psychology all with a special interest in how speech is produced from the initial neural program to the end acoustic signal it provides an overview of several dominant models in the speech production literature as well as up to date accounts of persistent theoretical issues in the area a particular focus is on the evaluation of information gleaned from instrumental investigations of the speech production process including mri pet ultra sound video imaging ema epg x ray computer simulation and many others the research presented in this volume considers questions such as the feed back vs feed forward control of speech the acoustic auditory vs articulatory somato sensory domains of speech planning the innateness of human speech the possible architecture of a speech production model and the realization of prosodic structure in speech leaders in speech research from around the world have contributed their most recent work to this volume

despite their many common features mechanical behavior multi scale structure evolutionary and living characteristics etc the tissues that make up the human body each have specific characteristics linked to their function which require the development of dedicated experimental theoretical and numerical methods mechanics of living tissues brings together the work of a number of experts to provide an overview of the most recent approaches developed to study the biomechanical behavior of these soft tissues in order to understand their structure and apparent behavior specific tissues are analyzed across the chapters with the aim of developing solutions that address the clinical problems encountered conclusions are then drawn regarding future methods that will improve the current state of knowledge of the behavior of these living tissues in particular with a view to predicting the effect of a pathology or medical procedure on their apparent properties

this book constitutes the proceedings of the 24th international conference on information processing in medical imaging ipmi 2015 held at the sabhal mor ostaig college on the isle of skye scotland uk in june july 2015 the 22 full papers and 41 poster papers presented in this volume were carefully reviewed and selected from 195 submissions they were organized in topical sections named probabilistic graphical models mri reconstruction clustering statistical methods longitudinal analysis microstructure imaging shape analysis multi atlas fusion fast image registration deformation models and the poster session

over 120 mathematicians participated in the 1996 conference in hangzhou on differential equations and applications this volume contains articles from the conference along with an exhaustive list of the conference speakers and their presentations

eugene goldfield lays out principles of engineering found in the natural world with a focus on how components of coordinated structures organize themselves into autonomous functional systems this self organizing capacity is one of many qualities which can be harnessed to design technologies that can interact seamlessly with human bodies

engineering mechanics dynamics 2nd edition provides engineers with a conceptual understanding of how dynamics is applied in the field this edition offers a student focused approach to dynamics with new problems and images that develop problem solving skills engineers will benefit from the numerous worked problems algorithmic problems and multi part go problems additional images have been added showing a link between an actual system and a modeled analyzed system the importance of communicating solutions through graphics is continuously emphasized with a focus on drawing correct free body diagrams and inertial response diagrams wileyplus is sold separately from this text

in the light of the notion of the african renaissance the book addresses the african language question with particular emphasis on the high potential and future roles of the indigenous languages for development in africa focus is on south africa s language policy as a role model for the whole continent the book makes an easy to read introduction to central issues of language planning in africa for students of the social sciences education and linguistics as much as for language practitioners educationists administrators

politicians and decisions makers the rich appendices offer reference tools with regard to sociolinguistic profiles of all african countries and important documents regarding linguistic rights and the role of language in africa
