existing copies of the shakespeare first folio 1623 were surveyed and counted a hundred years ago in sidney lee s census of 1902 since then some seventy copies have come to light some of which are only now identified as first folios this new census lists 229 copies giving concise descriptions of each the entries cover condition including the number of original leaves items of special interest provenance and binding a concordance of lee and west numbers is also provided to set the stage the volume tells the story of the search for copies and the detective work involved in dealing with doubtful identifications because folios survive in such a wide variety of condition the tests for defining what to count as a copy are described then demonstrated with three unnumbered unrecognized copies at the folger shakespeare library finally details of missing copies are given to increase the likelihood of their rediscovery

the legacy of alexander von humboldt 1769 1859 looms large over the natural sciences his

1799 1804 research expedition to central and south america with botanist aimé bonpland set the course for the great scientific surveys of the nineteenth century and inspired such essayists and artists as emerson goethe thoreau poe and church the chronicles of the expedition were published in paris after humboldt s return and first among them was the 1807 essay on the geography of plants among the most cited writings in natural history after the works of darwin and wallace this work appears here for the first time in a complete english language translation covering far more than its title implies it represents the first articulation of an integrative science of the earth encompassing most of today s environmental sciences ecologist stephen t jackson introduces the treatise and explains its enduring significance two centuries after its publication
