the way in which academic engineering research is financed and public expectations for the outcomes from such research are changing at an unprecedented rate the decrease in support of defense related research coupled with the realization that many u s technological products are no longer competitive in the global market has sent a shock wave through research universities that train engineers this book argues for several concrete actions on the part of universities government and industry to ensure the flow and relevance of technical talent to meet national social and economic goals to maintain a position of leadership in the global economy and to preserve and enhance the nation's engineering knowledge base

gender inequality represents one of the major problems that affect the academic world and scientific progress at present less than 30 of researchers worldwide are women long standing biases and gender stereotypes discourage women away from science related fields especially engineering engineering as a whole is a historically and currently male dominated research field and ensuring that female voices and research receive equal and indeed greater visibility attention and respect is of vital importance scientific progress is only possible and greatly accelerated if we have gender equality more women involved in a scientific field results in an expansion of the general knowledge in that field today while a gender equal society might be seen as both beneficial and desirable it is becoming extremely important to show especially to younger generations the growing impact of female researchers in science
