the articles in this volume are an outgrowth of a colloquium systemes integrables et feuilletages which was held in honor of the sixtieth birthday of pierre molino the topics cover the broad range of mathematical areas which were of keen interest to molino namely integral systems and more generally symplectic geometry and poisson structures foliations and lie transverse structures transitive structures and classification problems

the book under review is an interesting elaboration that fills the gaps in libraries for concisely written and student friendly books about essentials in computer science i recommend this book for anyone who would like to study algorithms learn a lot about computer science or simply would like to deepen their knowledge the book is written in very simple english and can be understood even by those with limited knowledge of the english language it should be emphasized that despite the fact that the book consists of many examples mathematical formulas and theorems it is very hard to find any mistakes errors or typos zbmathin computer science an algorithm is an unambiguous specification of how to solve a class of problems algorithms can perform calculation data processing and automated reasoning tasks as an effective method an algorithm can be expressed within a finite amount of space and time and in a well defined formal language for calculating a function starting from an initial state and initial input perhaps empty the instructions describe a computation that when executed proceeds through a finite number of well defined successive states eventually producing output and terminating at a final ending state the transition from one state to the next is not necessarily deterministic some algorithms known as randomized algorithms incorporate random input

this book introduces a set of concepts in solving problems computationally such as growth of functions backtracking divide and conquer greedy algorithms dynamic programming elementary graph algorithms minimal spanning tree single source shortest paths all pairs shortest paths flow networks polynomial multiplication to ways of solving np complete problems supported with comprehensive and detailed problems and solutions making it an ideal resource to those studying computer science computer engineering and information technology
