Risk and Return This is the cornerstone of investing Every investment carries a level of risk and the potential return should ideally compensate for that risk A highrisk investment like individual stocks could yield higher returns but it also carries a greater chance of losing money Conversely a lowrisk investment like a government bond offers lower returns but greater stability

Example Imagine investing 1000 A highrisk tech stock might double your money 200% return in a year or it could lose 50% of its value A government bond might offer a modest 3% return guaranteeing your principal The choice depends on your risk tolerance and financial goals

Portfolio Diversification Dont put all your eggs in one basket Diversification involves spreading your investments across different asset classes stocks bonds real estate etc and sectors to reduce overall portfolio risk If one investment performs poorly others can potentially offset those losses

Visual Example Imagine a pie chart A diversified portfolio would show slices representing different asset classes eg 40% stocks 30% bonds 20% real estate 10% cash A poorly diversified portfolio might have a huge slice dedicated to a single stock making it extremely vulnerable

Asset Allocation This refers to the proportion of your portfolio allocated to various asset classes Your asset allocation strategy should align with your investment goals time horizon and risk tolerance A younger investor with a longer time horizon might allocate a larger portion to stocks while an older investor nearing retirement might prefer a more conservative approach with a higher proportion of bonds

Modern Portfolio Theory (MPT) MPT emphasizes the importance of diversification and risk adjusted returns It suggests that investors can optimize their portfolio returns by carefully balancing risk and return aiming for the highest possible return for a given level of risk
