in this sophisticated overview of human emotions a widely respected psychologist and author addresses the ambiguities and embraces the controversies that surround this intriguing subject an insightful and lucid thinker jerome kagan examines what exactly we do know about emotions which popular assumptions about emotions are incorrect and how scientific study must proceed if we are to uncover the answers to persistent and evasive questions about emotions integrating the findings of anthropological psychological and biological studies in his wide ranging discussion kagan explores the evidence for great variation in the frequency and intensity of emotion among different cultures he also discusses variations among individuals within the same culture and the influences of gender class ethnicity and temperament on a person's emotional patina in his closing chapter the author proposes that three sources of evidence verbal descriptions of feelings behaviours and measures of brain states provide legitimate but different definitions of emotion translating data from one of these sources to another may not be possible kagan warns and those who study emotions must accept at least for now that their understanding is limited to and by the domain of their information
