au verso de la couverture the international hinode mission was launched from japan on 23 september 2006 the
 spacecraft carries a suite of instruments that permit observations of the sun and its atmosphere with
 unprecedented resolution and precision during its first two years of operation hinode has enabled numerous
 breakthroughs in our understanding of magnetic fields within the solar atmosphere and their relationship to
 the energetic solar phenomena that affect the earth s space environment some of those breakthroughs were
 presented at the first hinode science meeting held in dublin ireland in august 2007 aspcs volume 397 by the
 time the second hinode science meeting was held in boulder colorado 29 september 3 october 2008
 researchers had been able to subject hinode data to in depth quantitative analyses and to make comparisons

with detailed numerical and analytic models of solar phenomena this volume presents brief summaries of work presented at the second hinode science meeting
