recent decades have seen much greater attention paid to risk management at an organizational level as evidenced by the proliferation of legislation regulation international standards and good practice guidance the recent experience of covid 19 has only served to heighten this attention growing interest in the discipline has been accompanied by significant growth in the risk management profession but practitioners are not well served with suitable books to guide them in their work or challenge them in their professional development this book attempts to place the practice of risk management within organizations into a broader context looking as much at why we try to manage risk as how we try to manage risk in doing so it challenges two significant trends in the practice of risk management the treatment of risk management primarily as a compliance issue within an overall corporate governance narrative and the very widespread use of qualitative risk assessment tools heat maps etc which have absolutely no proven effectiveness taken together
