dummett regards the construction of a satisfactory theory of meaning as the most pressing task of contemporary analytical philosophy he believes that the successful completion of this difficult assignment will lead to a resolution of problems before which philosophy has been stalled in some instances for centuries

the dialectics of possibility and reality is an old philosophical theme in contrast to empirical sciences that deal with reality philosophy has sometimes been viewed as the science of the possible that said the modal concepts of possibility and necessity have proven to be ambiguous and

recalcitrant to analysis and their relation to the concept of reality remains problematic to the present day from aristotle to russell the belief that the real world by no means exhausts the possible worlds has attracted serious thought this work brings together a group of experts who are intent on transcending the worn out dichotomy between analytic and continental philosophy this collection takes a fresh look at the metaphysics and logic of possibility and reality and illuminates them from a great variety of perspectives topics include the history of philosophy from greek antiquity to david lewis as well as the semantics of possible worlds logic mathematics and computer science as well as literature and the new media forms of scientific as well as fictional discourse the basic position taken by many contributors is a commonsensical one in ordinary language we do not seem to have any problem in making statements about future possibilities without establishing definitive claims to their truth in other words one can speak of future contingencies without making claims for present day truths moreover the contributors hold that it seems quite feasible to talk of objective truth as a series of possibilities rather than empirical realities all branches of philosophy seem to agree that to think about possibilities is an inclination of human nature in short the more we know about possibilities the better human beings and actions relate to reality this is a serious effort that invokes a sense of intellectual history to explain issues that are vexing but not insoluble it will interest a variety of people from philosophers to social planners vitezslav horky is director of the dfg project on cultures of lying both he and hans rott are affiliated with universität regensburg institut für philosophie regensburg germany

the book discusses the central notion of logic the concept of logical consequence it shows that the classical definition of consequence as truth preservation in all models must be restricted to all admissible models the challenge for the philosophy of logic is therefore to supplement the definition with a criterion for admissible models the problem of logical constants so prominent in the current debate constitutes but a special case of this much more general demarcation problem the book explores the various dimensions of the problem of admissible models and argues that standard responses are unwarranted as a result it develops a new vision of logic suggesting in particular that logic is deeply imbued with metaphysics

this wide ranging collection of essays explores the nature of logic and the key issues and debates in the metaphysics of logic

this edited volume is a comprehensive presentation of views on the relations between metaphysics and logic from aristotle through twentieth century philosophers who contributed to the return of metaphysics in the analytic tradition the collection combines interest in logic and its history with interest in analytical metaphysics and the history of metaphysical thought by so doing it adds both to the historical understanding of metaphysical problems and to contemporary research in the field throughout the volume essays focus on metaphysica generalis or the systematic study of the most general categories of being beginning with aristotle and his categories the volume goes on to trace metaphysics and logic through the late ancient and arabic traditions examining the views of thomas aquinas duns scotus and william ockham moving into the early modern period contributors engage with leibniz's metaphysics kant's critique of metaphysics the relation between logic and ontology in hegel and

bolzano's views subsequent chapters address charles's peirce's logic and metaphysics the relevance of set theory to metaphysics meinong's theory of objects husserl's formal ontology early analytic philosophy c. i. lewis and his relation to russell and the relations between frege carnap and heidegger surveying metaphysics through to the contemporary age essays explore w. v. quine's attitude towards metaphysics wilfrid sellars's relation to antidescriptivism as it connects to kripke's the views of putnam and kaplan peter f. strawson's and david m. armstrong's metaphysics trope theory and its relation to popper's conception of three worlds the volume ends with a chapter on transcendental philosophy as ontology in each chapter contributors approach their topics not merely in an historical and exegetical fashion but also engage critically with the thought of the philosophers whose work they discuss offering synthesis and original philosophical thought in the volume in addition to very extensive and well informed analysis and interpretation of important philosophical texts the volume will serve as an essential reference for scholars of metaphysics and logic

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

philosophy has been called the science of the possible by philosophers as diverse as christian wolff and bertrand russell the modal concepts of possibility and necessity however have proved to be ambiguous and recalcitrant to analysis and their relation to the concept of reality have remained problematic up to the present day transcending the worn out dichotomy between analytic and continental philosophy this collection of papers takes a fresh look at the metaphysics and logic of possibility and reality and illuminates them from a great variety of perspectives topics include the history of philosophy from greek antiquity to david lewis as well as the semantics of possible worlds logic mathematics and computer science as well as literature and the new media forms of scientific as well as fictional discourse

featuring fourteen new essays from an international team of renowned contributors this volume explores the key issues debates and questions in the metaphysics of logic the book is structured in three parts looking first at the main positions in the nature of logic such as realism pluralism relativism objectivity nihilism conceptualism and conventionalism then focusing on historical topics such as the medieval aristotelian view of logic the problem of universals and bolzano's logical realism the final section tackles specific issues such as glutty theories contradiction the metaphysical conception of logical truth and the possible revision of logic the volume will provide readers with a rich and wide ranging survey a valuable digest of the many views in this area and a long overdue investigation of logic's relationship to us and the world it will be of interest to a wide range of scholars and students of philosophy logic and mathematics
