Robert A. Rankin, one of the world's foremost authorities on modular forms and a founding editor of the Ramanujan Journal, died on January 27, 2001, at the age of 85. Rankin had broad interests and contributed fundamental papers in a wide variety of areas within number theory, geometry, analysis, and algebra. To commemorate Rankin's life and work, the editors have collected together 25 papers by several eminent mathematicians reflecting Rankin's extensive range of interests within number theory. Many of these papers reflect Rankin's primary focus in modular forms. It is the editors' fervent hope that mathematicians will be stimulated by these papers and gain a greater appreciation for Rankin's contributions to mathematics. This volume would be an inspiration to students and researchers in the areas of number theory and modular forms.

This book explores leisure-related voluntary associations in France during the nineteenth century as practical expressions of the revolutionary concept of fraternité. Using a mass of unpublished sources in provincial and national archives, it analyses the history, geography, and cultural significance of amateur musical societies and sports clubs in eleven départements of France between 1848 and 1914. It demonstrates that although these voluntary associations drew upon and extended the traditional concept of cooperation and community, and the revolutionary concept of fraternity, they also incorporated the fundamental characteristics of competition and conflict. Although intended to produce social harmony in practice, they reflected the ideological hostilities and cultural tensions that permeated French society in the nineteenth century.

The Freud-Klein controversies, 1941-45, offers the first complete record of the extraordinary debates centering around the radical theories of Melanie Klein after Freud's death in 1939.

ireland has long been the focus of research into its geological foundations and history this book provides insights into the evolution of geological ideas in ireland gives assessments of underrepresented scientists and offers an appreciation of the value of geological collections for historical research through a series of twenty two papers this volume provides syntheses and analyses of aspects of this geological research and places the role of a number of individuals firmly within context the topics discussed include the considerations of the nature of igneous rocks aspects of geological mapping of the country the role played by irish scientists in determining the age of the earth and the importance of early mineralogical and geological collectors and the role their collections made to advancing geological knowledge both in ireland and europe the making of irish geology 1740 1940 will appeal to both the general and academic reader interested in the development of the geological sciences with a particular focus on ireland

this richly detailed 1981 biography captures both the personal life and the scientific career of isaac newton presenting a fully rounded picture of newton the man the scientist the philosopher the theologian and the public figure professor westfall treats all aspects of newton s career but his account centres on a full description of newton s achievements in science thus the core of the work describes the development of the calculus the experimentation that altered the direction of the science of optics and especially the investigations in celestial dynamics that led to the law of universal gravitation
