foreign aid and international development frequently bring with it a range of unintended consequences both negative and positive this book delves into these consequences providing a fresh and comprehensive guide to understanding and addressing them the

book starts by laying out a theoretical framework based on complexity thinking before going on to explore the ten most prevalent kinds of unintended effects of foreign aid backlash effects conflict effects migration and resettlement effects price effects marginalization effects behavioural effects negative spillover effects governance effects environmental effects and ripple effects each chapter revolves around a set of concrete case studies analysing the mechanisms underpinning the unintended effects and proposing ways in which policymakers practitioners and evaluators can tackle negative side effects and maximize positive side effects the book also includes personal testimonies a succinct overview of unintended effects and suggestions for further reading providing a clear overview of what side effects to anticipate when planning executing and evaluating aid this book will be an important resource for students development practitioners and policymakers alike the open access version of this book available at taylorfrancis.com has been made available under a creative commons attribution non commercial no derivatives cc by nc nd 4.0 license

model building is typically based on the identification of a set of established facts in any given field of research insofar as the model is then evaluated on how well it accounts for these facts psychology and specifically visual word identification and reading is no exception in this sense e.g. Amenta, Crepaldi (2012), Coltheart et al. (2001), Grainger, Jacobs (1996) what counts as an established fact however was never discussed in great detail it was typically considered for example that experimental effects need to replicate across e.g. individuals experimental settings and languages if they are to be believed the emphasis was on consistency perhaps under a tacit assumption that the universal principles lying behind our cognitive structures determine our behaviour for the most part or at least for that part that is relevant for model building there are signs that a different approach is growing up in reading research on a theoretical ground Dennis Norris Bayesian Reader (2006, 2009) has advanced the idea that models can dispense of static forms of representation i.e. fixed architectures and process information in a way that is dynamically constrained by context specific requirements Ram Frost (2012) has focused on language specific constraints in the development of general theories of reading on an empirical ground the most notable recent advance in visual word identification concern the demonstration that some previously established in the classic sense effects depend heavily on language Velan and Frost (2011) task e.g. Duñabeitia et al. (2011), Marelli et al. (2013), Kinoshita and Norris (2009) or even individual differences Andrews, Lo (2012, 2013) variability has become an intrinsic and informative aspect of cognitive processing rather than a sign of experimental weakness this research topic aims at moving forward in this new direction by providing an outlet for experimental and theoretical papers that i) explore more in depth the theoretical basis for considering variability as an intrinsic property of the human cognitive system ii) highlight new context dependent experimental effects in a way that is informative on the dynamics of the underlying cognitive processing iii) shed new light on known context dependent experimental effects again in a way that enhances their theoretical informativeness
