the problems arising from the existence of asymmetric information in public decision making have been widely explored by economists most of the traditional analysis of public sector activities has been reviewed to take account of the possible distortions arising from an asymmetric distribution of relevant information among the actors of the public decision making process a normative approach has been developed to design incentive schemes which tackle adverse selection and moral hazard problems within public organisations our understanding of these problems is now much better and some of the mechanisms designed have had important practical implications while this analysis is still under way in many fields of public economics as the papers by Jones and Zanolà and Trimarchi witness a debate is ongoing on the possible theoretical limitations of this approach and on its actual relevance for public sector activities this book encompasses different contributions to these issues on both theoretical and practical areas which were firstly presented at a conference in Catania the innermost problem in the current discussion arises from the fact that this normative analysis is firmly rooted in the complete contracting framework with the consequence that despite the analytical complexities of most models their results rely on very simplified assumptions most complexities of the organisation of public sector and more generally of writing contracts are therefore swept away

federal agencies have taken steps to include the public in a wide range of environmental decisions although some form of public participation is often required by law agencies usually have broad discretion about the extent of that involvement approaches vary widely from holding public information gathering meetings to forming advisory groups to actively including citizens in making and implementing decisions proponents of public participation argue that those who must live with the outcome of an environmental decision should have some influence on it critics maintain that public participation slows decision making and can lower its quality by including people unfamiliar with the science involved this book concludes that when done correctly public participation improves the quality of federal agencies decisions about the environment well managed public involvement also increases the legitimacy of decisions in the eyes of those affected by them which makes it more likely that the decisions will be implemented effectively this book recommends that

agencies recognize public participation as valuable to their objectives not just as a formality required by the law it details principles and approaches agencies can use to successfully involve the public

this report exposes how policy capture where public decisions over policies are consistently or repeatedly directed away from the public interest towards a specific interest can exacerbate inequalities and undermine democratic values economic growth and trust in government

looks at the critical role of community members and other interested parties in environmental policy decision making

this volume focuses on analytic methods as alternatives to traditional public policy decision making methods covers a broad spectrum of analytic aids to decision making focuses on the needs of the users rather than the interests of analysts demonstrates that analysis is not limited to questions that can be quantified and provides information both practical and theoretical on questions that are important to those who need analytical help and to those responsible for sponsoring evaluating and implementing the analyses of others for decision makers in the public sector 1989

this publication compares levels modes and domains of decision making processes in 14 oecd education systems during 1990 91 back cover
