in order to survive as a social institution a firm needs a constitutional social contract even though implicit among its stakeholders this social contract must exist if an institution is to be justified the book focuses on two main issues to find out the terms of the hypothetical agreement among the firm's stakeholders in an ex ante perspective and to understand the endogenous mechanism generating appropriate incentives that induce to comply with the social contract itself as seen in the ex post perspective

this book features interviews of 38 eminent mathematicians and mathematical scientists who were invited to participate in the programs of the institute for mathematical sciences national university of singapore originally published in its newsletter imprints from 2003 to 2009 these interviews give a fascinating and insightful glimpse into the passion driving some of the most creative minds in modern research in pure mathematics applied mathematics statistics economics and engineering the reader is drawn into a panorama of the past and present developments of some of the ideas that have revolutionized modern science and mathematics this book should be relevant to those who are interested in the history and psychology of ideas it should provide motivation inspiration and guidance to students who aspire to do research and to beginning researchers who are looking for career niches for those who wish to be broadly educated it is informative without delving into excessive technical details and is at the same time thought provoking enough to arouse their curiosity to learn more about the world around them

mainstream economics considers individual preferences to be fixed and unchanging although psychologists and other social scientists explore how tastes are formed influenced and evolve it is not considered proper in orthodox economics to do so arguing about tastes makes the case that economists should abandon the principle that preferences are fixed and instead incorporate into their work how context and experience shape individual tastes david m kreps argues that the discipline must account for dynamic personal tastes when it comes to understanding social exchange emphasizing human resource management and on the job behavior he develops formal models that illustrate the power of intrinsic motivation and show why applying extrinsic incentives can be counterproductive

kreps weighs the advantages and disadvantages of the principle *de gustibus non est disputandum* there is no arguing about tastes he calls for a new era of economics in which preferences are taken into account and not for granted arguing about tastes concludes with responses by the distinguished economists alessandra casella and joseph e stiglitz and a final reply by kreps

a new framework that shows how to derive the meaning of an utterance from first principles by modeling it as a system of interdependent games in language and equilibrium prashant parikh offers a new account of meaning for natural language he argues that equilibrium or balance among multiple interacting forces is a key attribute of language and meaning and shows how to derive the meaning of an utterance from first principles by modeling it as a system of interdependent games his account results in a novel view of semantics and pragmatics and describes how both may be integrated with syntax it considers many aspects of meaning including literal meaning and implicature and advances a detailed theory of definite descriptions as an application of the framework language and equilibrium is intended for a wide readership in the cognitive sciences including philosophers linguists and artificial intelligence researchers as well as neuroscientists psychologists and economists interested in language and communication

smart technologies and fundamental rights covers a broad range of vital topics that highlight the ethical socio political and legal challenges as well as technical issues of artificial intelligence with respect to fundamental rights either humanity will greatly profit from the use of ai in almost all domains in human life which may eventually lead to a much better and more humane society or it could be the case that people may misuse ai for idiosyncratic purposes and intelligent machines may turn against human beings therefore we should be extremely cautious with respect to the technological development of ai because we might not be able to control the machines once they reached a certain level of sophistication

in twelve essays influential scholars in political science explore the meaning of political leadership from the kaleidoscopic perspectives of the leaders institutions goals procedures problems and traditions involved the approaches as varied as the subject itself coalesce around the central question of how leaders interact with transform or are controlled by the organizations they lead

over the past two decades academic economics has undergone a mild revolution in methodology the language concepts and techniques of noncooperative game theory have become central to the discipline this book provides the reader with some basic concepts from noncooperative theory and then goes on to explore the strengths weaknesses and future of the theory as a tool of economic modelling and analysis the central theses are that noncooperative game theory has been a remarkably popular tool in economics over the past decade because it allows analysts to capture essential features of dynamic competition and competition where some parties have proprietary information the theory is weakest in providing a sense of when it and equilibrium analysis in particular can be applied and what to do when equilibrium analysis is inappropriate many of these weaknesses can be addressed by the consideration of individuals who are boundedly rational and learn imperfectly from the past written in a non technical style and working by analogy the book first given as part of the clarendon

lectures in economics is readily accessible to a broad audience and will be of interest to economists and students alike knowledge of game theory is not required as the concepts are developed as the book progresses

David M. Kreps has developed a text in microeconomics that is both challenging and user friendly. The work is designed for the first year graduate microeconomic theory course and is accessible to advanced undergraduates as well, placing unusual emphasis on modern noncooperative game theory. It provides the student and instructor with a unified treatment of modern microeconomic theory, one that stresses the behavior of the individual actor, consumer or firm, in various institutional settings. The author has taken special pains to explore the fundamental assumptions of the theories and techniques studied, pointing out both strengths and weaknesses. The book begins with an exposition of the standard models of choice and the market, with extra attention paid to choice under uncertainty and dynamic choice. General and partial equilibrium approaches are blended so that the student sees these approaches as points along a continuum. The work then turns to more modern developments. Readers are introduced to noncooperative game theory and shown how to model games and determine solution concepts. Models with incomplete information, the folk theorem, and reputation and bilateral bargaining are covered in depth. Information economics is explored next, a closing discussion concerns firms as organizations, and gives readers a taste of transaction cost economics.
