multitasking refers to performance of multiple tasks the most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching in the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations however these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents the present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations the contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training

alexander biedermann presents a generic hardware based virtualization approach which may transform an array of any off the shelf embedded processors into a multi processor system with high execution dynamism based on this approach he highlights concepts for the design of energy aware systems self healing systems as well as parallelized systems for the latter the novel so called agile processing scheme is introduced by the author which enables a seamless transition between sequential and parallel execution schemes the design of such virtualizable systems is further aided by introduction of a dedicated design framework which integrates into existing commercial workflows as a result this book

provides comprehensive design flows for the design of embedded multi processor systems on chip
