microcontrollers are present in many new and existing electronic products and the pic microcontroller is a leading processor in the embedded applications market students and development engineers need to be able to design new products using microcontrollers and this book explains from first principles how to use the universal development language c to create new pic based systems as well as the associated hardware interfacing principles the book includes many source code listings circuit schematics and hardware block diagrams it describes the internal hardware of 8 bit pic microcontroller outlines the development systems available to write and test c programs and shows how to use ccs c to create pic firmware in addition simple interfacing principles are explained a demonstration program for the pic mechatronics development board provided and some typical applications outlined focuses on the c programming language which is by far the most popular for microcontrollers mcus features proteus vsmg the most complete microcontroller simulator on the market along with ccs pcm c compiler both are highly compatible with microchip tools extensive downloadable content including fully worked examples

the refereed proceedings of the 4th international conference on image analysis and recognition are featured in this volume seventy one full papers are presented along with forty four poster papers these papers cover image restoration and enhancement image and video processing and analysis image segmentation computer vision pattern recognition for image analysis shape and matching motion analysis tracking and more

with the rapid growth of computing and display technologies digital holography dh has undergone significant advancement in the past two decades contemporary research works have enabled holography a technology which is originally intended for displaying three dimensional 3 d images to be deployed in numerous scientific engineering and bio medical applications notably digital holography has been incorporated into quite a number of contemporary applications such as but limited to holographic cryptography optical metrology remote sensing and inspection and more recently quantum computing the success attained with dh so far does not limit its development to its current state of the art but rather research on holography keeps on expanding with new ideas and methods keep coming up in a sustainable manner this research topic aims to collect representative works from experts in the field with the aim of providing an insight on the overall picture on digital holography as well as reporting existing methodologies and emerging technologies that are likely to have strong impact on future research directions participating in the research topic either as authors or readers also facilitates establishing a

platform for researchers to network and to share their knowledge

this book contains the refereed proceedings of the 14th international symposium on mathematical morphology ismm 2019 held in saarbrücken germany in july 2019 the 40 revised full papers presented together with one invited talk were carefully reviewed and selected from 54 submissions the papers are organized in topical sections on theory discrete topology and tomography trees and hierarchies multivariate morphology computational morphology machine learning segmentation applications in engineering and applications in bio medical imaging

this comprehensive book focuses on multimodality imaging technology including overviews of the instruments and methods followed by practical case studies that highlight use in the detection and treatment of cardiovascular diseases chapters cover pet ct spect ct spect mri pet mri pet optical imaging spect optical imaging photoacoustic imaging and hybrid intravascular imaging it also addresses the important issues of multimodality imaging probes and image quantification readers from radiology and cardiology as well as medical imaging and biomedical engineering will learn essentials of the field they will be shown how the field has advanced quantitative analysis of molecularly targeted imaging through improvements in the reliability and reproducibility of imaging data moreover they will be presented with quantification algorithms and case illustrations including coverage of such topics such as multimodality image fusion and kinetic modeling yi hwa liu phd is senior research scientist in cardiovascular medicine at yale university school of medicine and technical director of nuclear cardiology at yale new haven hospital he is also an associate professor adjunct of biomedical imaging and radiological sciences at national yang ming university taipei taiwan and professor adjunct of biomedical engineering at chung yuan christian university taoyuan taiwan he is an elected senior member of institute of electrical and electronic engineers ieee and a full member of sigma xi of the scientific research society of north america albert j sinusas m d facc faha is professor of medicine section of cardiovascular medicine and radiology and biomedical imaging at yale university school of medicine and director of the yale translational research imaging center y tric and director of advanced cardiovascular imaging at yale new haven hospital he is a recipient of the society of nuclear medicine s hermann blumgart award

geosynthetics in civil and environmental engineering presents contributions from the 4th asian regional conference on geosynthetics held in shanghai china the book covers a broad range of topics such as

fundamental principles and properties of geosynthetics testing and standards reinforcement soil improvement and ground improvement filter and drainage landfill engineering geosystem transport geosynthetics pile support system and geocell hydraulic application and ecological techniques special case studies as well as selected government sponsored projects such as the three gorges dam qinghai tibet railway and changi land reclamation project are also discussed the book will be an invaluable reference in this field

this book is a compilation of research work in the interdisciplinary areas of electronics communication and computing this book is specifically targeted at students research scholars and academicians the book covers the different approaches and techniques for specific applications such as particle swarm optimization otsu s function and harmony search optimization algorithm triple gate silicon on insulator soi mosfet micro raman and fourier transform infrared spectroscopy ftir analysis high k dielectric gate oxide spectrum sensing in cognitive radio microstrip antenna ground penetrating radar gpr with conducting surfaces and digital image forgery detection the contents of the book will be useful to academic and professional researchers alike

these four volumes contain the proceedings of the 1999 international conference on image processing the topic examined include segmentation for application image and texture analysis facial expressions analysis recognition and tracking and image mosaicing
