please note that the content of this book primarily consists of articles available from wikipedia or other free sources online pages 28 chapters center of momentum frame frame dragging frame fields in general relativity frame of reference inertial frame of reference laboratory frame of reference local reference frame moving frame non inertial reference frame preferred frame proper frame rotating reference frame synchronous frame terrestrial reference frame excerpt in physics an inertial frame of reference also inertial reference frame or inertial frame or galilean reference frame is a frame of reference that describes time and space homogeneously isotropically and in a time independent manner all inertial frames are in a state of constant rectilinear motion with respect to one another an accelerometer moving with any of them would detect zero acceleration measurements in one inertial frame

can be converted to measurements in another by a simple transformation the galilean transformation in newtonian physics and the lorentz transformation in special relativity in general relativity in any region small enough for the curvature of spacetime to be negligible one can find a set of inertial frames that approximately describe that region physical laws take the same form in all inertial frames by contrast in a non inertial reference frame the laws of physics vary depending on the acceleration of that frame with respect to an inertial frame and the usual physical forces must be supplemented by fictitious forces for example a ball dropped towards the ground does not go exactly straight down because the earth is rotating someone rotating with the earth must account for the coriolis effect in this case thought of as a force to predict the horizontal motion another example of such a fictitious force associated with rotating reference frames is the centrifugal effect or centrifugal force the motion of a body can only be described
