knowledge of and skill in physics are essential foundations for studies in science and engineering this book offers students an introduction to the basic concepts and principles of physics it covers various topics specifically related to physical mechanics the properties of matter and heat each chapter begins with a summary of concepts principles definitions and formulae to be discussed as well as ending with problems and solutions that illustrate the specific topic steps are detailed to help build reasoning and understanding there are 300 worked problems and 100 exercises in the book as well as 306 figures to help the reader visualize the processes being addressed computer calculations and solutions are carried out using wxmaxima to give insight and help build computational skills the book is aimed at first year undergraduate students studying introductory physics and would also be useful for physics teachers in their instruction particularly the exercises at the end of each chapter

understanding developmental processes in the individual as well as in aggregates of individuals is an important aim of many of the social and behavioral sciences this book presents a theoretical framework for this endeavor an architecture for the study of human development across different disciplines this architecture describes two major sources of human development biology and culture and posits three central developmental mechanisms selection optimization and compensation

this book highlights state of the art developments in metaheuristics research it examines all aspects of metaheuristic research including new algorithmic developments applications new research challenges theoretical developments implementation issues in depth experimental studies the book is divided into two sections part i is focused on new optimization and modeling techniques based on metaheuristics the chapters in this section cover topics from multi objective problems with fuzzy data with triangular valued objective functions to hyper heuristics optimization methodology designing genetic algorithms and also the cuckoo search algorithm the techniques described help to enhance the usability and increase the potential of metaheuristic algorithms part ii showcases advanced metaheuristic approaches to solve real life applications issues this includes an examination of scheduling the vehicle routing problem multimedia sensor network supplier selection bin packing objects tracking and radio frequency identification in the fields covered in the chapters are of high impact applications of metaheuristics the chapters offer innovative applications of metaheuristics that have a potential of widening research frontiers altogether this book offers a comprehensive look at how researchers are currently using metaheuristics in different domains of design and application

escape 20 is the most recent in a series of conferences that serves as a forum for engineers scientists researchers managers and students from academia and industry to present and discuss progress being made in the area of computer aided process engineering cape cape covers computer aided methods algorithms and techniques related to process and product engineering the escape 20 scientific program reflects the strategic objectives of the cape working party to check the status of historically consolidated topics by means of their industrial application and to evaluate their emerging issues includes a cd that contains all research papers and contributions features a truly international scope with guest speakers and keynote talks from leaders in science and industry presents papers covering the latest research key topical areas and developments in computer aided process engineering cape

students with diverse backgrounds will face a multitude of decisions in a variety of engineering scientific industrial and financial settings they will need to know how to identify problems that the methods of operations research or can solve how to structure the problems into standard mathematical models and finally how to apply or develop computational tools to solve the problems perfect for any one semester course in or operations research a practical introduction answers all of these needs in addition to providing a practical introduction and guide to using or techniques it includes a timely examination of innovative methods and practical issues related to the development and use of computer implementations it provides a sound introduction to the mathematical models relevant to or and illustrates the effective use of or techniques with examples drawn from industrial computing engineering and business applications many students will take only one course in the techniques of operations research operations research a practical introduction offers them the greatest benefit from that course through a broad survey of the techniques and tools available for quantitative decision making it will also encourage other students to pursue more advanced studies and provides you a concise well structured vehicle for delivering the best possible overview of the discipline

within this volume the rapid evolutionary changes currently pervading all telecommunication fields are explored changes in teletraffic technology such as from analog to digital from dedicated systems to service integrated networks insure a steady increase in teletraffic research activities in the near future included in the over 1000 pages of high quality research reports are six in depth workshops organized by renown experts in the fields of atm stochastic modelling systems engineering and traffic engineering future telecom scenarios teletraffic problems of

developing countries and history of teletraffic keynote speakers were given the opportunity of first choices among the papers submitted ensuring excellent quality among the papers included

includes subconference prestigious applications of intelligent systems pairs 2008
