this second edition presents a collection of exercises on the theory of analytic functions including completed and detailed solutions it introduces students to various applications and aspects of the theory of analytic functions not always touched on in a first course while also addressing topics of interest to electrical engineering students e g the realization of rational functions and its connections to the theory of linear systems and state space representations of such systems it provides examples of important hilbert spaces of analytic functions in particular the hardy space and the fock space and also includes a section reviewing essential aspects of topology functional analysis and lebesgue integration benefits of the 2nd edition rational functions are now covered in a separate chapter further the section on conformal mappings has been expanded

this is the first book to compare eight ldfs by different types of datasets such as fisher s iris data medical data with collinearities swiss banknote data that is a linearly separable data lsd student pass fail determination using student attributes 18 pass fail determinations using exam scores japanese automobile data and six microarray datasets

the datasets that are lsd we developed the 100 fold cross validation for the small sample method method 1 instead of the loo method we proposed a simple model selection procedure to choose the best model having minimum m2 and revised ip oldf based on mnm criterion was found to be better than other m2s in the above datasets we compared two statistical ldfs and six mp based ldfs those were fisher s ldf logistic regression three svms revised ip oldf and another two oldfs only a hard margin svm h svm and revised ip oldf could discriminate lsd theoretically problem 2 we solved the defect of the generalized inverse matrices problem 3 for more than 10 years many researchers have struggled to analyze the microarray dataset that is lsd problem 5 if we call the linearly separable model matroska the dataset consists of numerous smaller matroskas in it we develop the matroska feature selection method method 2 it finds the surprising structure of the dataset that is the disjoint union of several small matroskas our theory and methods reveal new facts of gene analysis

a high level treatment of complex analysis this text focuses on function theory on a finitely connected planar domain clear and complete it emphasizes domains bounded by a finite number of disjoint analytic simple closed curves the first chapter and parts of chapters 2 and 3 offer background material all of it classical and important in its own right the remainder of the text presents results in complex analysis from the far middle and recent past all selected for their interest and merit as substantive mathematics suitable for upper level undergraduates and graduate students this text is accessible to anyone with a background in complex and functional analysis author stephen d fisher a professor of mathematics at northwestern university elaborates upon and extends results with a set of exercises at the end of each chapter

revised and updated edition of a standard in the field alerts readers to the problems inherent in statistical practice illustrating the types of misused statistics with well documented real world examples nearly half new to this edition drawn from a wide range of areas including the media public policy polls and surveys political elections and debates advertising science and health care and business and economics

this encyclopaedia of mathematics aims to be a reference work for all parts of mathematics it is a translation with updates and editorial comments of the soviet mathematical encyclo paedia published by soviet encyclopaedia publishing house in five volumes in 1977 1985 the annotated translation consists of ten volumes including a special index volume there are three kinds of articles in this encyclopaedia first of all there are survey

type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used the main requirement for these articles has been that they should give a reason ably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible on the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science en gineers and teachers of mathematics these articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question they also contain background and motivation rather than precise statements of pre cise theorems with detailed definitions and technical details on how to carry out proofs and con structions
