this text examines the interaction between blast pressure and surface or underground structures whether the blast is from civilian military dust and natural explosions or any other source

icssd 2002 is the second in the series of international conferences on structural stability and dynamics which provides a forum for the exchange of ideas and experiences in structural stability and dynamics among academics engineers scientists and applied mathematicians held in the modern and vibrant city of singapore icssd 2002 provides a peep at the areas which experts on structural stability and dynamics will be occupied with in the near future from the technical sessions it is evident that well known structural stability and dynamic theories and the computational tools have evolved to an even more advanced stage many delegates from diverse lands have contributed to the icssd 2002 proceedings along with the participation of colleagues from the first asian workshop on meshfree

~~methods and the international workshop on recent advances in experiments and~~
computations on modeling of heterogeneous systems forming a valuable source for future reference the proceedings contain 153 papers including 3 keynote papers and 23 invited papers contributed by authors from all over the world who are working in advanced multi disciplinary areas of research in engineering all these papers are peer reviewed with excellent quality and cover the topics of structural stability structural dynamics computational methods wave propagation nonlinear analysis failure analysis inverse problems non destructive evaluation smart materials and structures vibration control and seismic responses the major features of the book are summarized as follows a total of 153 papers are included with many of them presenting fresh ideas and new areas of research all papers have been peer reviewed and are grouped into sections for easy reference wide coverage of research areas is provided and yet there is good linkage with the central topic of structural stability and dynamics the methods discussed include those that are theoretical analytical computational artificial evolutionary and experimental the applications range from civil to mechanical to geo mechanical engineering and even to bioengineering

the book focuses on the application methods of negative poisson s ratio materials this book classifies existing negative poisson s ratio materials and demonstrates its innovation in the research of negative poisson s ratio materials by providing methods for the production of negative poisson s ratio polymers and composites as well as optimisation methods the book also systematically introduces the manufacturing methods and various application scenarios of negative poisson s ratio materials making it particularly suitable for readers interested in learning about new negative poisson s ratio materials this book will benefit researchers engineers and graduate students in materials engineering mechanical engineering manufacturing and related fields

vols 1 108 include proceedings of the society separately paged beginning with v 30
