Mr Ridley's best and most important work to date there is something profoundly democratic and egalitarian even anti elitist in this bottom up approach everyone can have a role in bringing about change wall street journal the new york times bestselling author of the rational optimist and genome returns with a fascinating argument for evolution that definitively dispels a dangerous widespread myth that we can command and control our world human society evolves change in

technology language morality and society is incremental inexorable gradual and spontaneous it follows a narrative going from one stage to the next and it largely happens by trial and error a version of natural selection much of the human world is the result of human action but not of human design it emerges from the interactions of millions not from the plans of a few drawing on fascinating evidence from science economics history politics and philosophy matt ridley demolishes conventional assumptions that the great events and trends of our day are dictated by those on high on the contrary our most important achievements develop from the bottom up the industrial revolution cell phones the rise of asia and the internet were never planned they happened languages emerged and evolved by a form of natural selection as did common law torture racism slavery and pedophilia all once widely regarded as acceptable are now seen as immoral despite the decline of religion in recent decades in this wide ranging erudite book ridley brilliantly makes the case for evolution rather than design as the force that has shaped much of our culture our technology our minds and that even now is shaping our future

how new ideas emerge one of the biggest most dangerous myths that we believe today is that we have full command and control of our world but have you ever considered that our world goes through evolution or that our world evolves on its own in fact evolution doesn't apply just to biology anymore there is an evolution of everything the changes we experience in technology language morality and society are gradual incremental and even spontaneous the changes follow a narrative going from one stage to the next without an end goal in mind you see we traditionally believe that many of the greatest achievements in the world started from the top down that is changes came from great leaders and minds who aimed to make a difference but that is not necessarily true instead our world has evolved from the bottom up and achievements such as the industrial revolution cell phones and the creation of the internet were never planned they simply happened through the evolution of everything author matt ridley argues that evolution can explain just about every change we have experienced in society as you read you'll learn how dna and language are similar how money became monopolized by the government and how our traditional views on education should no longer be accepted do you want more free book summaries like this download our app for free at [quickread.com](http://quickread.com) app and get access to hundreds of free book and audiobook summaries disclaimer this book summary is meant as a preview and not a replacement for the original work if you like this summary please consider purchasing the original book to get the full experience as the original author intended it to be if you are the original author of any book on quickread and want us to remove it please contact us at [hello@quickread.com](mailto:hello@quickread.com)

building on his national bestseller the rational optimist matt ridley chronicles the history of innovation and how we need to change our thinking on the subject innovation is the main event of the modern age the reason we experience both dramatic improvements in our living standards and unsettling changes in our society forget short term symptoms like donald trump and brexit it is innovation that will shape the twenty first century yet innovation remains a mysterious process poorly understood by policy makers and businessmen alike matt ridley argues that we need to see innovation as an incremental bottom up fortuitous process that happens as a direct result of the human habit of exchange rather than an orderly top down process developing according to a plan innovation is crucially different from invention because it is the turning of inventions into things of practical and affordable use to people it speeds up in some sectors and slows down in others it is always a collective collaborative phenomenon involving trial and error not a matter of lonely genius it happens mainly in just a few parts of the world at any one time it still cannot be modeled properly by economists but it can easily be discouraged by politicians far from there being too much innovation we may be on the brink of an innovation famine ridley derives these and other lessons from the lively stories of scores of innovations how they started and why they succeeded or failed some of the innovation stories he tells are about steam engines jet engines search engines airships coffee potatoes vaping vaccines cuisine antibiotics mosquito nets turbines propellers fertilizer zero computers dogs farming fire genetic engineering gene editing container shipping railways cars safety rules wheeled suitcases mobile phones corrugated iron powered flight chlorinated water toilets vacuum cleaners shale gas the telegraph radio social media block chain the sharing economy artificial intelligence fake bomb detectors phantom games consoles fraudulent blood tests hyperloop tubes herbicides copyright and even life itself

our summary is short simple and pragmatic it allows you to have the essential ideas of a big book in less than 30 minutes by reading this summary you will learn that the slow unprogrammed evolution of societies is what really makes them progress and not the voluntarist projects of an elite you will also learn that darwinism is only one specific theory of evolution we must free ourselves from creationism evolution is more important than revolutions the importance of so called great men is a myth the first step towards electric lighting dates back to 1712 the work is under the auspices of adam smith as much as darwin matt ridley is an iconoclastic author who happily cultivates a certain british eccentricity and british matt ridley is british to the core sitting in the house of lords as 5th viscount ridley moreover in the anglo saxon world his work has been widely debated unleashing passions the oppositions that his theses have met are fierce as are the supports of his supporters another reason to

read his work indispensable to the modern honest man buy now the summary of this book for the modest price of a cup of coffee

sex is as fascinating to scientists as it is to the rest of us a vast pool of knowledge therefore has been gleaned from research into the nature of sex from the contentious problem of why the wasteful reproductive process exists at all to how individuals choose their mates and what traits they find attractive this fascinating book explores those findings and their implications for the sexual behaviour of our own species it uses the red queen from *Alice in Wonderland* who has to run at full speed to stay where she is as a metaphor for a whole range of sexual behaviours the book was shortlisted for the 1994 Rhône-Poulenc prize for science books animals and plants evolved sex to fend off parasitic infection now look where it has got us men want BMWs power and money in order to pair bond with women who are blonde youthful and narrow waisted a brilliant examination of the scientific debates on the hows and whys of sex and evolution independent

what makes us who we are in february 2001 it was announced that the genome contains not 100 000 genes as originally expected but only 30 000 this startling revision led some scientists to conclude that there are simply not enough human genes to account for all the different ways people behave we must be made by nurture not nature yet again biology was to be stretched on the procrustean bed of the nature nurture debate

the modern world is dominated by ideas that are threatening to kill us that life is one long battle from conception to grave that all creatures including human beings are driven by their selfish dna that the universe is just stuff for us to use at will these ideas are seen as emerging from science and hard nosed philosophy and become self fulfilling they have led us to create a world in perpetual strife that is unjust and in many ways precarious this remarkable book by an experienced author and thinker argues there s another way of looking at the world that is just as rooted in modern science and yet says precisely the opposite that life is in fact cooperative all creatures including human beings are basically nice that there s more to the stuff of the world than meets the eye this book is both a powerful call to rethink our assumptions and a message of hope for those who believe we re doomed to self destruction

ridley is spot on when it comes to the vital ingredients for success sir james dyson building on his bestseller the rational optimist matt ridley chronicles the history of innovation and how we need to change our thinking on the subject innovation is the main event of the modern age the reason we experience both dramatic improvements in our living standards and unsettling changes in our society it is innovation that will shape the twenty first century yet innovation remains a mysterious process poorly understood by policy makers and businessmen alike matt ridley argues that we need to see innovation as an incremental bottom up fortuitous process that happens as a direct result of the human habit of exchange rather than an orderly top down process developing according to a plan innovation is crucially different from invention because it is the turning of inventions into things of practical and affordable use to people it speeds up in some sectors and slows down in others it is always a collective collaborative phenomenon involving trial and error not a matter of lonely genius it still cannot be modelled properly by economists but it can easily be discouraged by politicians far from there being too much innovation we

may be on the brink of an innovation famine ridley derives these and other lessons from the lively stories of scores of innovations from steam engines to search engines how they started and why they succeeded or failed

a new and updated edition of the hugely successful learning revolution

anthropocene theater and the shakespearean stage revises the anthropocentric narrative of early globalization from the perspective of the non human world in order to demonstrate nature s agency in determining ecological economic and colonial outcomes it welcomes readers to reimagine theater history in broader terms and to account for more non human and atmospheric players in the otherwise anthropocentric history of shakespearean performance this book analyses plays horticultural manuals cosmetic recipes puritan polemics and travel writing in order to demonstrate how the material practices of the stage both catalyze and resist early forms of globalization in an ecological arena william steffen addresses the role of an understudied ecological performance history in determining shakespeare s iconic cultural status and models how non human players have undermined shakespeare s authoritative role in colonial discourse finally this book makes a celebratory argument for the humanities in the age of climate change and invites

interdisciplinary engagement a research community that is compelled to find strategies for cultivating a hopeful tomorrow amidst unprecedented anthropogenic environmental changes

chan and ridley write with an urgency that inspires gripping depictions of what viruses are how infectious disease laboratories work and wonderfully lucid descriptions of bats they powerfully recount how dangerous pathogens can both leak from a lab and emerge in nature new york times book review understanding how covid 19 started is crucial for the future of humankind viral is the most incisive and authoritative book about the search for the source of the virus a new virus descended on the human species in 2019 wreaking unprecedented havoc finding out where it came from and how it first jumped into people is an urgent priority but early expectations that this would prove an easy question to answer have been dashed nearly two years into the pandemic the crucial mystery of the origin of sars cov 2 is not only unresolved but has deepened in this uniquely insightful book a scientist and a writer join forces to try to get to the bottom of how a virus whose closest relations live in bats in subtropical southern china somehow managed to begin spreading among people more than 1 500 kilometres away in the city of wuhan they grapple with the baffling fact that the virus left none of the expected traces that such outbreaks usually create no infected market animals or wildlife no chains of early cases in travellers to the city no smouldering epidemic in a rural area no rapid adaptation of the virus to its new host human beings to try to solve this pressing mystery viral delves deep into the events of 2019 leading up to 2021 the details of what went on in animal markets and virology laboratories the records and data hidden from sight within archived chinese theses and websites and the clues that can be coaxed from the very text of the virus s own genetic code the result is a gripping detective story that takes the reader deeper and deeper into a metaphorical cave of mystery one by one the authors explore promising tunnels only to show that they are blind alleys until miles beneath the surface they find themselves tantalisingly close to a shaft that leads to the light
