introducing virtual clinical excursions a new breed of workbook that is now a critical component of several of Mosby and W.B. Saunders most prominent nursing texts inside an extraordinary new CD-ROM provides an incredibly true to life simulation of clinical practice. This CD-ROM features a virtual hospital setting with five unique patients. These patients have their own diverse health problems, medical histories, families, cultural backgrounds, and personalities. You can access the patients, review their charts, lab data, and medication administration records, monitor daily changes when their nurses take their vital signs, and perform a variety of tests, formulate nursing diagnoses, and plan interventions. In short, you can practice making all of the clinical decisions that lie at the heart of nursing on your own schedule and at your own convenience. This workbook sends you into the virtual hospital setting to learn communication, documentation, assessment, critical thinking, and other essential skills. It also calls on you to collect information, make decisions, and set priorities. Each lesson has a reading assignment from Phipps, Monahan, Sands, Marek, Neighbors' Medical-Surgical Nursing: Health and Illness Perspectives, Seventh Edition, as well as activities that call on you to visit the patients in the virtual hospital. The workbook exercises provide a perfect environment in which you can practice what you are learning from the text. The result is a uniquely hands-on way to master essential nursing knowledge.

Virtual Clinical Excursions Phase 2 is a workbook CD-ROM package that guides the student through a multi-floor virtual hospital in a hands-on learning experience. The student is actively engaged with the workbook CD-ROM and parent text throughout each lesson. Each lesson has a core textbook reading assignment and activities based on visiting the patients in the hospital. The lessons in the workbook complement the content in the textbook and provide a perfect environment in which students may practice what they are learning in the text. The multi-floor virtual hospital also has built-in testing of clinical knowledge with NCLEX-type questions. As the student visits each patient, they are able to access realistic information resources essential for patient care. Information resources include charts, medical administration records, electronic patient records, video streaming of patient dialogue with nurses, and other related materials. These resources provide an opportunity for the student to assess and analyze information, make a diagnosis, set priorities, and implement and evaluate care. Included is a guided tutorial which shows students how to work with a patient in the virtual hospital, collect patient data from various sources, reports, charts, medication administration record, short video clips, and audio clips of nurse-patient interactions, record patient data, listen to a report, and itemize a patient's problems and high-priority concerns. Sometimes administering medications requires students to use their critical thinking skills to set priorities for care, collect data, analyze and interpret data, and reach conclusions about complex problems within a health-illness transition. Encourages active learning and provides opportunities to identify information to collect and process data for evidence-based patient care, work with data entry and retrieval screens, optimize use of available information resources, understand hospital information systems, manage information for decision making, and maintain and improve core computing skills.
