an encyclopedic summary of the highlights in the field of free radicals in medicine and biology with a detailed analysis of the extensive recent literature the text describes results from experimental research work on dust inhalation hypoxia and environmental toxicology that uses morphologic methods such as electron microscopy interference microscopy and time lapse techniques in tissue cultures the volume discusses free radical reactions that are probably involved in the pathogenesis of both physical and chemical environmental hazards it lists radical scavengers that function as useful prophylactic agents in case of unavoidable exposure a short history of dust diseases that have challenged mankind since prehistoric times serves as an introduction to this comprehensive treatise it is hoped that by covering this field in one monograph the increasingly recognized and important role of both oxygen and nitrogen centred radicals in disease pathogenesis will become clearer the enclosed cd includes nearly 25 000 literature citations useful as a reference source for researchers clinicians and students

this book offers pathologists toxicologists other medical professionals and students an introduction to the discipline and techniques of neuropathology including chemical and environmental biological medical and regulatory details important for performing an analysis of toxicant induced neurodiseases in addition to a section on fundamentals the book provides detailed coverage of current practices bioassays molecular analysis and nervous system pathology and practical aspects data interpretation regulatory considerations and tips for preparing reports

pathology oxidative stress and dietary antioxidants bridges the disciplinary knowledge gap to help advance medical sciences and provide preventative and treatment strategies for pathologists health care workers food scientists and nutritionists who have divergent skills this is important as oxidative stress can be ameliorated with pharmacological nutraceutical or natural agents while pathologists and clinical workers understand the processes in disease they are less conversant in the science of nutrition and dietetics conversely nutritionists and dietitians are less conversant with the detailed clinical background and science of pathology this book helps to fill those gaps

this volume is a collection of original essays focusing on a wide range of topics in the history and philosophy of science it is a festschrift for peter machamer which includes contributions from scholars who at one time or another were his students the essays bring together analyses of issues and debates spanning from early modern science and philosophy through the 21st century machamer s influence is reflected in the volume s broad range of topics these include underdetermination

scientific practice scientific models mechanistic explanation in contemporary and historical science values in science the relationship between philosophy and psychology experimentation supervenience and reductionism

as in so many fields of scientific endeavour following the molecular biology revolution our knowledge of the role of radicals not only in pathological states but in basic physiology has developed exponentially indeed our evolving concepts have like so many political parties been forced into dramatic turns and contortions within our working lives we have had to debate whether radicals made any contribution to any pathology whilst now it is difficult not to entertain the view that every physiological process is pivotally controlled by exquisitely sensitive radical reactions inflammation is of course an example of pathology evolving from physiology and in this book we have called upon both scientists and clinicians who have research interests in the complex switching mechanisms that sustain these transitions the book as a whole explores from a physiological standpoint how deterministic radical systems sensitive to their initial conditions can interdigitate iterate and feed back to control diverse cellular processes that create the inflammatory response whilst systems such as these to a mathematician would provide the basis for a chaotic response one is forced to marvel how for all stages of an inflammatory reaction this system appears exquisitely controlled making therapeutic manipulation both possible and to some extent predictable
